

Basic Unified Messaging capabilities are now available as a standard feature on all of our InnLine voice mail product lines: InnLine IP Elite, InnLine IP, Elite, InnLine 2020, and InnLine Express.

ADD-ON MODULE

Functionality

When a caller leaves a message for a staff mailbox, the voice system will send that member an email notification which will include a .wav file attachment of the voice message. Initially there won't be any synchronization between the user's email client and the voice mail system. This means that if the user deletes the email with the voice message attached, it will not be automatically removed from the user's mailbox. The reverse also holds true.

In addition, the voice mail system will be able to send an email notification (without the voice message attachment) if desired. This is useful for individuals who want to receive an incoming text message on their mobile phone alerting them to check their voice mailbox. This feature is available to be activated on a per-staff mailbox basis.

Available as a standard feature on all systems including InnLine IP Elite, InnLine IP, Elite, InnLine 2020, and InnLine Express.
